Transferring files

1 Install the driver

1.1 Windows ® 98SE users: Please install the driver from the bundled CD disc.
After installation is finished, please restart your computer ;

1.2 Windows ® Me/2000/XP/Mac ® OS X 10.2.6 users: No need to install driver.
Note: If the 'New Hardware' wizard appears, press 'Next'.

2 Connect Digital Music Player to USB port

2.1 Remove the USB port cover of the player.

2.2 Connect the player into the USB port on your personal computer (PC) using a
USB cable.

2.3 The built-in LCD displays 'MTP Connected', indicating that the player is in USB
mode. The player is then automatically recognized on your computer (in 'My
Computer') as a removable media device.

3 Preparing your music files

3.1 In order to play music on your Digital Music Player the music files must first be
saved onto your PC. Music files can be put onto your PC by either:

a) Uploading them from your CD collection, OR ;

b) Downloading them from online stores

3.2 Where on my PC can I store my music?

Music can be stored in the 'My Music' folder on your C:drive either directly or via
a music management program such as Windows Media Player version 10.
Details of how to use Windows Media Player can be found on the microsoft
website (www.microsoft.com).
(http://www.microsoft.com/windows/windowsmedia/mp10/usingplayer.aspx)

3.3 What format should my music be in?

Make sure your music files are in a compressed file format that can be transferred to your Digital Music Player. We recommend the files are WMA (e.g. <filename.wma>) since these offer superior quality sound at a fraction of the size of MP3 files. You can use Windows Media Player to convert your CDs into WMA format. This process is called ripping.

4 Ripping

When ripping CD's you can choose the bit rate (audio quality). The higher the bit rate, the higher the quality music but the larger the file. We recommend 64Kbps for WMA and 128Kbps for MP3 files.

When ripping CD's make sure the copy protect feature is disabled, see below for details:

- Start Windows Media Player
- Right click on the bar at the top of the Windows Media Player window and select 'Tools' and then 'Options'.
- In the window that appears choose the 'Rip music' tab
- Ensure the tick is removed from the 'copy protect music' box.
- Click OK and copy your music to your PC.

Once all your music files are in WMA (or MP3) format...

5 Transfer your music

5.1 Transfer your music files to your Digital Music Player using either Windows explorer or the Sync feature in the Windows Media Player.

Note : The Sync feature must be used for transferring copy protected (DRM) files.

5.2 When your player has finished copying and the LCD displays 'MTP Connected', unplug the player from your computer using the 'Safely Remove Hardware' icon.
